I am an experienced Area Manager with the last 5 years of experience in an international environment and 1.5 years of experience in sales of IT products (software & hardware). First and foremost, I am an aspiring FullStack Developer currently enrolled in a rigorous one-year course. I am deeply passionate about problem-solving both independently and collaboratively. My focus is on enhancing my proficiency in Typescript, Next.js, and Tailwind, recognizing their relevance and impact in modern web development.

*University of Zielona Góra*

## IT Team Projects

**2023-09 - present**

### Team Lead & Fullstack Developer

*Wallet - web app*

https://github.com/Pawel-Eliszewski/WalletApp-backend
https://github.com/Pawel-Eliszewski/WalletApp-frontend

- **Project overview:** (*in progress*) A two-week sprint to develop and deploy a full-stack web application designed for managing personal finances. The main functions include adding, editing, and deleting transactions that contribute to the total balance, displayed in a diagram divided into categories. The app also incorporates registration and login authentication functionality, utilizing Google API and more. All data is stored in a MongoDB database, with the frontend deployed on Netlify and the backend on Render.

### Frontend Developer

*Filmoteka - website*

https://rafallakomiec.github.io/filmoteka-goit-js-group-project/

- **Project overview:** Two-week sprint to build & deploy website integrated with The Movie Database API, useful to showcase list of movies (trending and query) along with their in-depth details. Website is deployed on GitHub Pages.
- **Team info:** 8-person team working remotely with Figma's model. RWD (3 breakpoints) with Mobile-First approach. Tasks distributed in Trello by Scrum Master. Daily Slack Huddle meetings to summarize tasks progress.
- **Frontend main stack:** HTML, SASS, JavaScript, TMDB API, Axios, LocalStorage, TUI-Pagination, Git.
- **My main tasks:** Pagination functionality & helping other Developers.

2022-12
- 2022-12

### Frontend Developer

*IceCream - website*

https://piotrek92pl.github.io/ICP-Team-Project/

- **Project overview:** One-week sprint to build & deploy website of a fake icecream manufactory containing, among others, Products, Advantages & Contacts sections. Website is deployed on GitHub Pages.
- **Team info:** 7-person team working remotely with Figma's model. RWD (3 breakpoints) with Mobile-First approach. Tasks distributed in Trello by Scrum Master. Daily Slack Huddle meetings to summarize tasks progress.
- **Frontend main stack:** HTML, SASS, JavaScript, Git.
- **My main tasks:** Section "Products" & helping other Developers.

## IT Solo Projects (selected)

### WebStudio - website

https://webstudio-react.netlify.app/

- **Project overview:** (*in progress*) Website for a fake webstudio deployed on Netifly. The project is built with multiple reusable components & working forms (Formspree), with easy-to-add content (e.g., from a CMS). I am currently working on a Dark Mode toggle, component animations & styles.
- **Frontend main stack:** React, Hooks, PropTypes, css.modules, MUI, Git.

### Phone Book - web app

https://phonebook-react-refactored.netlify.app/

- **Project overview:** (*in progress*) Simple phonebook web app deployed on Netifly. Project covers auth, adding, filtering & deleting contacts. I am currently working on a new layout (Material UI), RWD & Google login API.
- **App main stack:** React, Hooks, PropTypes, JWT, Axios, Heroku, Notiflix, css.modules, Git.
